1 year of experience as a Web Developer, collaborating within a team to build modern web applications for +5 companies offering products and services. Contributed to enhancing customer experiences and developing internal administrative tools tailored to client needs increasing productivity by over 25%, streamlining workflows and reducing manual tasks. Currently pursuing a Bachelor's degree in Information Systems.

Experience

Web Developer

Remote

El Dorado Research Group

November 2023–April 2024

- Contributed to building “Supportify”, an AI-powered tool, by collaborating to develop both the frontend and backend from the ground up, having +10 interested clients before app launch.
- Joined an ongoing project called “DullesGlass”, contributing to the development of tools that ensure data integrity by adapting to the client's pre-existing data storage format.
- Designed a service request UI for TheLandscapeList, enabling users to select from 20+ dynamic service parameters, improving service customization and reducing miscommunication with clients.
- Collaborated in Agile Scrum practices to improve team productivity and ensure timely delivery of product iterations.
- Collaborated with a cross-functional team of 6 developers, contributing code through 15+ pull requests with consistent approvals and code reviews.
- Developed a tool that processed JSON files with 50000+ entries containing interrelated data, converting them into the database's native format while verifying data existence and relational consistency. The tool cleaned and updated the database using JSON exports generated from a client-facing interface used to input business data.

Freelancer Full-Stack Developer

Remote

Upwork Freelancing

January 2022–August 2022

- Developed an application from scratch that enabled business owners to create quizzes based on a minimum of 5 questions tailored to their customers' preferences, generating personalized product recommendations based on quiz results.
- Implemented a subscription-based payment system for business owners using the product, integrating Stripe as the payment processing platform.
- Developed an algorithm that matched quiz responses to products by leveraging attribute-based scoring assigned to both questions and products, enabling accurate product recommendations tailored to customer preferences, receiving feedback from customers that indicated around 80% of them felt satisfied with the resultant products.
- Received a 5-star rating from the client on the freelancing platform through which the project was delivered.

Education

Universidad Nacional del Nordeste
Systems Analysis and Programming Technical Degree.

Corrientes, Argentina
Feb. 2022–Dec. 2024

Relevant personal projects

Microblogging Network

React, NestJs, GraphQL, PostgreSQL

- This application is a social network oriented to microblogging. Everyone can make posts and comment posts of other users. A comment works exactly like the parent post does, so we can have infinitely nested posts.

Wazaa

React, Socket.io

- Wazaa is a socket based chat application where you can set your username and join or create rooms to chat with other users.

Users Manager

React, Express, MongoDB

- You can create, get, edit and delete users.
-
